

Strategic Business Intelligence Report: Marketing Performance Optimization

Prepared for: Executive Leadership

Prepared by: Angel Macedo-Menendez

Date: January 26, 2026

Introduction

The objective of this report is to provide a comprehensive, data-driven evaluation of our marketing performance, sales funnel efficiency, and revenue impact, with the singular focus of identifying and capitalizing on high-leverage optimization opportunities.

***Leadership Context:** This analysis is the direct result of the new data infrastructure I personally architected and implemented. By connecting leads, operations, sales, and marketing spend—a capability the agency previously lacked—we have transitioned from operating on anecdotal evidence to executing with surgical, data-backed precision. Our current performance is strong, with a total **Return on Ad Spend (ROAS) of 28.14** and **\$13.02 Million in Revenue**. However, this audit reveals four critical, addressable inefficiencies that are suppressing our true revenue potential.*

Methodology

Performance was measured by aggregating key metrics across all marketing channels and customer segments. The foundation of this analysis is the reporting_summary_v2 view, which I created to link all stages of the customer journey.

Key Performance Indicators (KPIs) Summary

Metric	Value	Definition
Total Revenue	\$13,015,500	Total revenue generated
Total Leads	3,000	Total leads generated.
Overall ROAS	28.14	Total Revenue / Total Allocated Spend.
Close Rate	12.27%	Closed Deals / Total Leads (Top-of-Funnel Efficiency).

CAC	\$1,256.79	Total Allocated Spend / Closed Deals.
-----	------------	---------------------------------------

Key Findings and Problems

Problem 1: Funnel Leakage and Inefficient Sales Process

The most significant bottleneck is the conversion rate between a booked call and a closed deal, indicating a substantial loss of qualified leads.

- **No-Show Crisis:** The data shows that **29% of booked calls result in a no-show** (952 Show-ups / 1,341 Booked Calls). This leakage represents a direct waste of marketing spend and a massive drain on the sales team's capacity.

Funnel Conversion Rates

Stage	Conversion Rate	Implication
Lead to Booked Call	44.7%	Strong lead quality.
Booked Call to Show-up	71.0%	Critical Leakage Point.
Show-up to Closed Deal	38.7%	Solid, but improvable, sales execution.

Problem 2: Channel Misalignment and the TikTok Drag

The **TikTok** channel is a significant drag on overall profitability and efficiency, delivering low-quality volume at a high cost.

- **Low Profitability:** TikTok's ROAS is **9.23**, which is less than a third of the average ROAS for all other paid channels combined (**32.57**).
- **Low Efficiency:** TikTok leads have the lowest **Lead-to-Close % (7.16%)** and the lowest **Average Lead Score (3.02)**.

Channel Profitability Comparison

Channel	ROAS	Lead-to-Close %	LTV per Lead
TikTok	9.23	7.16%	\$1,871
LinkedIn	23.47	21.22%	\$7,315

Meta	28.26	11.14%	\$4,140
-------------	-------	--------	---------

Problem 3: The Upsell Gap in Large Agencies

The analysis of upsell revenue reveals a clear missed opportunity with our most valuable clients: the **16+ agents** segment. We are not effectively cross-selling or upselling our full suite of services to our largest, most profitable customers.

Upsell Revenue as % of Total LTV

Agency Size	Upsell % of LTV	Upsell per Deal
Solo	4.46%	\$1,467
16+ Agents	2.57%	\$925

The **Solo** segment generates nearly double the upsell revenue relative to its LTV compared to the **16+ Agents** segment, suggesting a lack of a structured upsell strategy for our enterprise-level clients.

Problem 4: Stagnant Lead Velocity Growth

While our total lead volume is increasing month-over-month, the rate of growth is decelerating, indicating a potential saturation point or a lack of aggressive investment in high-volume channels.

- **Decelerating Growth:** The growth rate in total leads has slowed significantly from the beginning of the period. For example, the jump from January to February was proportionally much larger than the jump from May to June.

Monthly Lead Volume Trend

Month	Total Leads
Jan	98
Jun	900

This trend suggests that without strategic intervention, our lead volume will plateau, capping our revenue potential.

Optimization Actions

Based on these four findings, I recommend four clear, high-impact actions to immediately drive efficiency and revenue expansion.

1. Action: Implement Automated Pre-Call Nurture

- **What to do:** Systematically reduce the 29% no-show rate.
- **How to do it:** Deploy a mandatory, multi-channel automated sequence (SMS, email) of reminders and value-add content immediately after a call is booked.
- **Why it will improve performance:** This directly addresses the most significant funnel leakage point, increasing the Show-up Rate by a projected **15%** and maximizing the utilization of our sales team.

2. Action: Strategic Budget Reallocation (TikTok to LinkedIn)

- **What to do:** Shift budget from the lowest-performing paid channel to the highest-quality channel.
- **How to do it:** Immediately reduce the allocated spend on **TikTok** by **50%** and reallocate that budget to **LinkedIn**.
- **Why it will improve performance:** This action will immediately reduce the blended CAC and increase the blended ROAS by moving spend from a channel with a 9.23 ROAS to channels with an average ROAS over 30.

3. Action: Launch a Targeted Upsell Program for Large Agencies

- **What to do:** Close the Upsell Gap by increasing upsell revenue from the **16+ agents** segment.
- **How to do it:** Develop a dedicated upsell playbook and training for the sales team, focusing on the **16+ agents** segment to bring their upsell contribution closer to the 4.46% benchmark.
- **Why it will improve performance:** This is pure revenue expansion from our most valuable customer base, unlocking high-margin revenue with minimal additional marketing spend.

4. Action: Aggressive Investment in High-Volume, High-ROAS Channels

- **What to do:** Counter the decelerating Lead Velocity growth trend.
- **How to do it:** Reinvest the capital freed up from the TikTok reallocation and the initial funnel efficiency gains into our highest-volume, highest-ROAS channels: **Meta** and **Google Search**.
- **Why it will improve performance:** This ensures that our lead volume continues to grow aggressively, preventing a plateau and guaranteeing that new investment is channeled into the most profitable areas of the business.

Projected Impact

By executing these four optimization actions, we project a substantial increase in closed deals and total revenue, with a significant improvement in overall profitability.

Metric	Current Performance	Projected Performance	Improvement
Total LTV	\$13.02 Million	\$16.17 Million	+24.2%
Overall ROAS	28.14	34.95	+24.2%
Closed Deals	368	454	+23.4%

Assumptions Behind Projections:

- 1 **Funnel Efficiency Gains:** We project a combined effect leading to a **23.4% increase in Closed Deals** from the same marketing spend.
- 2 **Budget Reallocation:** The shift from TikTok to LinkedIn is factored into the projected lead volume and LTV.

- 3 **Upsell Optimization:** We project a conservative increase in upsell revenue from the **16+ agents** segment, which contributes to the final LTV projection.

Future Business Impact

The successful execution of this strategy will cement our transition from a high-potential, but unsophisticated, agency to a **data-driven market leader**.

- **Revenue Growth and Profitability:** A **\$3.15 Million increase in Total LTV** and a jump in ROAS to **34.95** will dramatically improve our bottom line and provide capital for strategic expansion.
- **Efficiency and Scalability:** By fixing the no-show crisis and optimizing the sales process, we are **maximizing the value of every lead** and every hour of sales time. The strategic reallocation of budget establishes a clear, repeatable, and scalable model for future marketing investment.
- **Strategic Leadership:** The implementation of this data infrastructure and the resulting strategic audit positions us to make decisions with surgical precision, ensuring that our growth is not just fast, but **sustainable and highly profitable**. We are no longer guessing; we are executing based on irrefutable data.
